A;Title: Interchain disulfide bridges of guinea pig gamma-2- immunoglobulin.

A;Reference number: A90354; MUID:71058474; PMID:4922544

A;Rontents: annotation; disulfide bonds

A;Note: Cys-16 is involved in a heavy-light chain bond

A;Note: Cys-16; Cys-107, Cys-107, and Cys-110 form inter-heavy chain bonds

C;Comment: This chain was isolated from pooled serum of strain 13 inbred guinea pigs.
C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap c);Complex: An immunoglobulin light (kap c);Complex: An immunoglobulin light (kap c);Complex: An immun

The present invention describes composition of matter (I) comprising Fc domain, pharmacologically active peptides, and linkers. Where (I) $(X1)_{A}-F1-(X2)_{b}$, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1,

P2

Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases.

The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. cc neuroprotective activities. (I) can be used as a therapeutic or prophylactic agent as well as for screening purposes. (I) is useful for cdiagnosing diseases characterised by dysfunction of their associated cc protein of interest, for identifying normal or abnormal proteins of interest, as a part of diagnostic kit to detect the presence of their compounds are useful autoimmune diseases, tumour growth, cancer, rheumacoid arthritis, diabetic retinopathy, obesity, sleep disorders, compounds are useful for treating disorders, the compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic compounds are useful for treating conditions that involve an existing megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency and Fanconi's syndrome. ABB72403 to ABB73426 and ABL35695 to ABL35777 represent amino acid and nucleic acid sequences used in the

The present invention describes composition of matter (I) comprising an CC Fc domain, pharmacologically active peptides, and linkers. Where (I) is: CC (X1)a-F1-(X2)b, where: Fl = an Fc domain; X1 and X2 = are each cach cC (X1)a-F1-(X2)b, where: Fl = an Fc domain; X1 and X2 = are each cC (X1)a-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1)c-F1-(X1

The TWEAK receptor proteins of the invention are also used in the production of transgenic animals and plants. The present sequence is human TWEAK receptor (TWEAKR) - Gly5 - IgG1 FC portion fusion protein. This fusion protein comprises a N-terminal methionine residue, human TWEAKR (residues 29 through 70 of the SEQ ID NO: 7), five glycine residues (linker) and the FC portion of human IgG1. This sequence is used to illustrate an ELISA-style assay useful for determining the binding properties of TWEAK binding molecules.
                                                                                                                                                                                                                                                                                             TWEAK protein; TREPA; Apo3L; TWEAK receptor; radiotherapy; chemotherapy; pharmaceutical; delivery mechanism; antagonist; anglogenesis inhibition; transgenic animal; transgenic plant; protein interaction; animal disease model; angiogenesis disorder; antiangiogenic; solid tumor cytostatic; neoplasm; opthalmological; inflammation; antiinflammatory;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   functional TWEAK (also called TREPA and Apo3L) receptor (TWEAK oligomerization domain. The invention is useful for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New fusion proteins comprising multimeric soluble TWEAK receptor fragments and an oligomerization domain, useful for antagonizing receptor or for treating diseases mediated by anglogenesis, e.g.

The invention is useful for inhibiting angiogenesis and for treating diseases such as solid tumors, ocular neovascularization and inflammatory conditions. The TWEAK receptor proteins of the invention are also used in the production of transgenic animals and plants. The present sequence is human TWEAK receptor (TWEAKR) - Gly5 - TWEAKR - Gly5 - IGG1 Fc portion fusion protein. This fusion protein comprises a N-terminal methionine residue, human TWEAKR, pentaglycine linker and the Fc portion of human IGG1 where the TWEAKR, pentaglycine linker and the Fc portion of the SEQ ID NO: 7. This sequence is used to illustrate an ELISA-setyle assay useful for determining the hinding to hinding the sequence is used to illustrate an ELISA-setyle assay useful for determining the hinding to hinding the manner.
                                                                                                                                                                                                                                                                                                                                            Sequence 322 AA;

The present invention provides methods and compositions relating to the present invention provides methods and compositions relating to the major functional TWEAK (also called TREPA and Apoll) receptor (TWEAKR) and an collygemerization domain. The invention is useful for inhibiting and an collygemerization domain. The invention is useful for inhibiting angiogenesis and for treating diseases such as solid tumors, ocular convex collarization and inflammatory conditions. The TWEAK receptor convex cularization and inflammatory conditions. The TWEAK receptor contains of the invention are also used in the production of transgenic animals and plants. The present sequence is human TWEAK receptor (TWEAKR) contains and plants. The present sequence is human TWEAKR, this fusion protein. This fusion corresponds to residues 29 through 70 of the SEQ ID contains TWEAKR, pentaglycine linker and the Fc portion of human TWEAKR, linker, the TWEAK receptor corresponds to residues 29 through 70 of the SEQ ID contains sequence is used to illustrate an ELISA-style assay useful contains the binding properties of TWEAK binding molecules.
                                                                                                                                                                                                                                                                                  Claim 40; SEQ ID NO 18; 140pp; English
                                                                                                                                                                                                                                                                                                                                    New fusion proteins comprising multimeric soluble TWEAK receptor fragments and an oligomerization domain, useful for antagonizing receptor or for treating diseases mediated by angiogenesis, e.g.
